State Finished

Completed on Wednesday, 24 July 2019, 6:10 PM

Time taken 6 mins 30 secs

Grade 10.00 out of 10.00 (**100**%)

Feedback Congratulations - An outstanding performance.

Question 1

Correct

Mark 1.00 out of 1.00

How does resource scheduling tie to project priority?

Select one:

- a. By determining the order in which resources work on projects
- b. By using net present value (NPV) calculations to rank projects
- c. By limiting the time each resource is allocated
- d. By issuing priority directives from the project office

Your answer is correct.

Resource scheduling ties to project priority because resources are limited. Remember, the priority system ranks projects which then determines which project each resource should work on first.

The correct answer is: By determining the order in which resources work on projects

Ouestion 2
Correct

Mark 1.00 out of 1.00

A. When resources are considered, management expects the project to be completed earlier than the original deadline.

b. When constrained resources are scheduled, the first rule of thumb is to increase slack to reduce constraints.

c. When constrained resources are scheduled, the first rule of thumb is to reduce slack to get an efficient schedule. ✓

Your answer is correct.

longer free for other activities.

Resource scheduling heuristics usually reduces flexibility because when constrained resources exist, the first rule of thumb is to schedule resources by reducing slack to get an efficient schedule. When slack is used up, flexibility is lost and the critical path will often change. The original scheduled project completion date may not be feasible, when scheduling constraints are taken into account.

d. When resources are considered, the person who schedules the resources is no

The correct answer is: When constrained resources are scheduled, the first rule of thumb is to reduce slack to get an efficient schedule.

Ouestion 3
Correct

Mark 1.00 out of 1.00

Select one or more:

a. To check if existing resources are adequate and available. ✓

b. To determine if the estimates have been padded.

c. To determine where the real slack is.

d. To decide if an imposed project duration is realistic. ✓

Your answer is correct.

/

Several reasons for scheduling resources are to:

• Check if existing resources are adequate and available.

e. To decide which resources have priority.

- · Decide which resources have priority.
- Assess the impact if another project is added to the pool.
- Determine where the real critical path is. Are there unforeseen dependencies?
- See what happens to the risk of being late if slack is used up developing a schedule.
- · Decide if outside contractors have to be used.
- Decide if an imposed project duration is realistic.

The correct answers are: To check if existing resources are adequate and available., To decide which resources have priority., To decide if an imposed project duration is realistic.

Ouestion 4
Correct
Mark 1.00 out of 1.00

How can outsourcing project work alleviate problems associated with multi-project resource scheduling? (You may select more than one answer).

Select one or more:

■ a. Outsourcing can be used to avoid resource bottlenecks. ✓

Select one or more:

✓ a. Outsourcing can be used to avoid resource bottlenecks. ✓

b. Outsourcing can be used to reduce the risk of increased slack.

✓ c. Outsourcing can be used to improve utilization of critical resources. ✓

✓ d. Outsourcing can be used to reduce project slippage. ✓

e. Outsourcing can be used to build a WBS more efficiently.

Your answer is correct.

Outsourcing can be used to reduce project slippage, improve utilisation of critical resources, and avoid resource bottlenecks. For example, project delays can be avoided by contracting key activities when resources are not available internally. Likewise, hiring consultants to help with resource constraints allows critical people to work on specific, mission-critical problems, while the outsiders work on more standard problems. Not only does the project get done on time, but the company avoids hiring permanent personnel to meet a short term need.

The correct answers are: Outsourcing can be used to avoid resource bottlenecks., Outsourcing can be used to improve utilization of critical resources., Outsourcing can be used to reduce project slippage.

Question 5
Correct
Mark 1.00 out of 1.00

Why is it critical to develop a time-phased baseline?

Select one:

- a. It decreases the risk by increasing flexibility.
- b. It increases free slack (but not total slack).
- c. It levels resources automatically.
- d. It measures how much work is accomplished for the money spent.

Your answer is correct.

Other systems do not measure how much work is accomplished for the money spent! Hence, without time-phasing cost to match your project schedule, it is impossible to have reliable information for control purposes.

The correct answer is: It measures how much work is accomplished for the money spent.

Question 6 Correct	All of the following are common reasons for crashing a project EXCEPT :	
Mark 1.00 out of 1.00	Select one:	
	a. To exceed customer expectations.	
	b. To make up for lost time and avoid contract penalties.	
	c. To save extensive direct costs. ✓	
	d. To gain a time-to-market competitive advantage.	
	e. To realise benefits from incentive contracts.	
	Your answer is correct.	
	Crashing increases direct costs but decreases indirect costs.	
	The correct answer is: To save extensive direct costs.	
Question 7	Why is scheduling overtime a popular choice for getting projects back on schedule?	
Correct	(You may select more than one answer).	
Mark 1.00 out of 1.00	Select one or more:	
	 a. Even if it involves additional costs, you minimise additional coordination and training costs. 	
	b. If it involves hourly workers no direct costs are added to the project.	
	d. It tends to avoid accidents, inferior performance, and turnover.	

Your answer is correct.

Scheduling overtime is popular because, if it involves salaried workers, no direct costs are added to the project. Even if it involves additional costs, you avoid Brook's law and minimise additional coordination and training costs.

The disadvantages are the additional time-and-a-half costs associated with hourly overtime, and the stress and fatigue that come with working long hours which can lead to accidents, inferior performance, and turnover.

The correct answers are: Even if it involves additional costs, you minimise additional coordination and training costs., If it involves salaried workers, no direct costs are added to the project.

Question 8 Correct	Which of the following are true regarding cost-duration graphs? (You may select more than one answer).
Mark 1.00 out of 1.00	Select one or more: a. Incentives and penalties can be evaluated against the direct costs without regard to the indirect costs. b. Any alternative that moves the project duration away from the optimum cost-duration point will increase costs. ✓ c. Incentives and penalties can be evaluated against the total, low cost point. ✓ d. Any alternative that moves the project duration away from the optimum cost-duration point will increase time of completion.
	Your answer is correct. The correct answers are: Any alternative that moves the project duration away from the optimum cost-duration point will increase costs., Incentives and penalties can be evaluated against the total, low cost point.

Question **9**Correct

Mark 1.00 out of 1.00

All of the following are ways to accelerate project completion when resources are not constrained **EXCEPT**:

Select one:

- a. Establish a Core Project Team.
- b. Do It Twice—Fast and Correctly.
- c. Adding Resources.
- d. Fast-Tracking.
- e. Outsourcing Project Work.

Your answer is correct.

Fast-tracking is an option when resources are constrained.

The correct answer is: Fast-Tracking.

All of the following are ways to accelerate project completion when resources are constrained EXCEPT:

Mark 1.00 out of 1.00

Select one:

a. Fast-Tracking.

b. Compromising Quality.

c. Critical-Chain.

d. Scheduling Overtime. ✓

Your answer is correct.

Scheduling Overtime is an option when resources are not constrained.

The correct answer is: Scheduling Overtime.

e. Reducing Project Scope.
